

MC Series™ Heater

The MC Series Heater™ from HTP sets the standard for economy, ease of operation, and energy conservation. Modulating condensing technology and a compact, wall-hung design ensure that the gas-fired MC Series Heater is not only highly efficient, but is easy to install and will provide years of low cost operation.

- **Low energy costs** – resulting from ultra high efficiencies of up to 93% AFUE
- **High system efficiency even during low load conditions** – the modulating burner operates at a 3 to 1 turndown ratio, matching fuel consumption to demand
- **Enhanced comfort and efficiency** – weather responsive outdoor reset controls match the supply temperature to the heating need, preventing overheating
- **Sized to suit small to moderate residential applications** – available in four models, ranging from 50,000 to 120,000 BTUs
- **Compact, convenient design** – this space-saving wall-hung appliance has all its mechanical connections on the bottom of the unit for easy installation and maintenance
- **Quality construction** – an extremely durable stainless steel heat exchanger boasts excellent heat transfer properties and resists corrosion
- **Excellent venting options** – uses inexpensive, easy-to-install PVC or CPVC pipe
- **Eligible for tax credits and utility company rebates** – based on Energy Star ratings (Excludes 399 Model)
